

DATE: 1/2017

TOPIC: Door Panel Installation

VEHICLE: Honda Civic

The Civic door panels were patterned to follow the contour of the door which has a much better finished look than the factory.

TO INSTALL:

- 1) With a razor blade, shave off the top of the **factory stitch** where the seam veers upward.
- 2) When installing, the stitch on the cover is the aligned to the contour of the door. This is how they should look when properly installed.

To see a video demonstration of this installation, please go to the Katzkin You Tube page and search for “Honda Civic Installation”.
